

JavaScript Lab10

1- Your assignment contains 3 files: car.js, flyingcar.js and base.js

a- car.js module

contains Car class with the following properties:

a- model ("pmw", "picanto" and so on)

b- year

c- toString Function that's return car's data(model,year)

Export the class

b- FlyingCar.js module

contains FlyingCar class that inherits from car and has a property **canFly**(true or false)

FlyingCar Class has toString Function that call parent function besides "I can Fly" or "I can't fly" depending on **canFly Boolean value**

Export the class

c- Base.js module

Create FlyingCar object and call toString function
